DETAILED ACTION

Election/Restrictions

Claims 11-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 4.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, applicant should clarify the intended method steps. It appears that applicant intended, line 2 to state "the inductor comprising". Applicant should clarify. Claims 2-10 inherit the defect of the parent claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10, as best understood in view of the rejection under 35 U.S.C. 112 second paragraph, are rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander [US 5,661,882] in view of Iwanami [US 6,384,706].

Alexander discloses an embedded electronic component [125, figure 2] mounted within a cavity [112] formed by a plurality of LTCC tape layers [111].

Alexander discloses the instant claimed invention except for the specific structure of the electronic component.

Iwanami discloses a multi-dimensional inductor formed of a plurality of layers of conductors [figure 3] printed on a plurality of dielectric layers [5] and interconnected by means of vias [7].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the inductor design of Iwanami for the electronic component of Alexander for the purpose of enabling fabrication of an inductor within the multilayer substrate.

Regarding claims 4-10, the specific numbers of windings/conductors, dielectric layers, shape of the conductors/windings and the interconnection thereof would have been an obvious design consideration based on the intended inductance.
